Mounting the heat pump close to the floor means it develops more convection – so in theory the heat will get distributed more evenly. But – be careful where they are located, as the heat at floor level can get blocked by furniture, whereas high wall models usually have a clear space.

[Choosing a heat pump - Consumer NZ](#)

A heat pump is an all-in-one heating and air conditioning system. In the summer, it pulls heat from the inside of your home and transfers it outside. During the colder months, it does the opposite by collecting heat from the outdoor air and bringing it indoors. It can also be used in conjunction with a gas furnace to share the heat load.
