Electroacupuncture: Uses, Process, Evidence, Side Effects ...

Acupuncture produced hemodynamic signal increase in the anterior insula, and decrease in limbic and paralimbic structures including the amygdala, anterior hippocampus, and the cortices of the subgenual and retrosplenial cingulate, ventromedial prefrontal cortex, frontal, and temporal poles, results not seen for tactile control stimulation. Only electroacupuncture produced significant signal increase in the anterior middle cingulate cortex, whereas 2-Hz electroacupuncture produced signal ...

Effects of electroacupuncture versus manual acupuncture on ...

Previous work by our research group indicated that deep electroacupuncture (EA) stimulation at GB 30 improved the pathological changes and function of the injured sciatic nerve in rats, which was closely associated with its effects on the upregulation of nerve growth factor expression and downregulation of Fos expression in the damaged sciatic nerve.

David Mayor and Tony Steffert, was first proposed in 2001, and has been in progress since Summer 2011. Here you can find some formal and informal reports, updates and background information (in date order).

Electroacupuncture – Investigating the Effects of ...
Less-efficient CPM have been reported in people with chronic pain, and impaired CPM might have a role in the development and maintenance of chronic pain [34, 35, 36]. In humans, to our knowledge, ours is the first study to assess the efficacy of EA in improving the CPM in patients with KOA.

Effects of intensity of electroacupuncture on chronic pain ...

CONCLUSION: Given the EA group showed a significant increase in maximum breaking strength, it is likely that EA stimulation increases the mechanical strength of a repaired tendon after long-term recovery, and EA stimulation could be useful for preventing re-rupture.

Effect of electroacupuncture stimulation on long-term ...

Stimulation of one needle took approximately 5 seconds. This results in 10 stimulations per needle and a total of 20 stimulations during the 5 minutes of needling. Electrical Stimulation. Electroacupuncture was performed using the AS Super 4 HAN electroacupuncture stimulator (Schwa-Medico, Ehringshausen, Germany).

BACKGROUND: Electroacupuncture (EA) stimulation has been shown to have a great therapeutic potential for treating gastrointestinal motility disorders. However, no evidence has clarified the mechanisms contributing to the effects of EA stimulation at the Zusanli acupoint (ST.36).

Effect of electroacupuncture stimulation at Zusanli ... Electroacupuncture. Electroacupuncture is a relatively recent variant that employs electrical currents applied to the needles.^{6,7} One of the major issues in the investigations of acupuncture is that many different sites for stimulation (acupoints) are used in traditional Chinese medicine to treat various maladies.^{8,9}

Electroacupuncture - an overview | ScienceDirect Topics

In our review, we show the application of EA stimulation for apoplectic pain, limbs spasticity, blood flow interruption, depression, swallowing dysfunction, aphasia, urinary incontinence, cognition and memory impairment, and constipation following stroke in patients and the related mechanisms in animals.

The Therapeutic Effect of Electroacupuncture Therapy for ...

For treatment-related side effects, there were 3 cases of subcutaneous hemorrhage in the electroacupuncture group; 1 case of skin rashes and 3 cases of nausea and vomiting in the control group. The incidences of adverse reactions in the two groups were 9.4% and 12.1%, respectively, without significant difference ($P > 0.05$).

Electroacupuncture (EA) stimulation has been shown to have a great therapeutic potential for treating gastrointestinal motility disorders. However, no evidence has clarified the mechanisms contributing to the effects of EA stimulation at the Zusanli acupoint (ST.36). This study was designed to investigate the regulative effect of EA stimulation at the ST.36 on gastric motility and to explore ...

2.1.5 Safety assessment EA-related adverse events (AEs) were recorded within 24 hours of occurrence. Treatment-related AEs included pain, subcutaneous hematoma, localized infection and pigmentation, broken needle, fainting, nausea, headache, dizziness, insomnia, vomiting, and palpitations during or after treatment. 2.2 Statistical analysis

Effects of electroacupuncture on patients with chronic ...

Acupuncture is among the non-pharmacological strategies, the effects of which can be potentiated by electroacupuncture (EA). EA allows the stimulation of a larger area around the acupoint for a shorter time and, especially, allows parameters such as intensity, duration, and frequency of the stimulus to be easily identified and quantified [7].
