In other words, the internal combustion engines are those engines in which the combustion of fuel takes place inside the engine cylinder by a spark. These are petrol, diesel and gas engines. An engine is a

*Introduction to internal combustion engine – Car Engineer ...*

Researchers from Valencia's Polytechnic University (UPV) have designed a new internal combustion engine that does not generate carbon dioxide (CO<sub>2</sub>) or gasses that are harmful to people's health. According to its creators, it is a revolutionary engine that meets the regulation on emissions planned for 2040 and also has high efficiency.

**Executive Summary** Internal combustion (IC) engines operating on fossil fuel oil provide about 25% of the world's power (about 3000 out of 13,000 million tons oil equivalent per year—see Figure 1), and in doing so, they produce about 10% of the world's greenhouse gas (GHG) emissions (Figure 2).

Various scientists and engineers contributed to the development of internal combustion engines. In 1791, John Barber developed a turbine. In 1794 Thomas Mead patented a gas engine. Also in 1794 Robert Street patented an internal-combustion engine, which was also the first to use the liquid fuel and built an engine around that time. In 1798, John Stevens designed the first American internal combustion engine. In 1807, French engineers Nicéphore and Claude Niépce ran a prototype internal ...

*History of the internal  
combustion engine -  
Wikipedia*

Internal-combustion engine, any of a group of devices in which the reactants of combustion (oxidizer and fuel) and the products of combustion serve as the working fluids of the engine. Such an engine gains its energy from heat released during the combustion of the nonreacted working fluids, the oxidizer-fuel mixture.
