Chapter 2. Rules In the last chapter, we wrote some rules to compile and link our word-counting program. Each of those rules defines a target, that is, a file to ... - Selection from *Managing Projects with GNU Make, 3rd Edition [Book]*

*2. Rules - Managing Projects with GNU Make, 3rd Edition [Book]*

This work is derived directly from *Managing Projects with GNU Make, Third Edition*, which was written by by Robert Mecklenburg and published by O'Reilly & Associates, Inc. in 2004 under the terms of GNU Free Documentation License (FDL). This derivative is maintained and published by Stephan Beal as of June 2007. For the full copyright

*Managing Projects with GNU Make, 3.Xth Edition*

since the second edition of *Managing Projects with make* hit the stands: • The GNU version of *make*, already the choice of most serious coders when the second edition of the book came out, overran the industry and turned into the de facto standard. • The rise of GNU/Linux made the GNU compiler tool chain even more com-mon, and that includes the GNU version of *make*. As just one example, the Linux

*Managing Projects with GNU Make, Third Edition*

9. Java - *Managing Projects with GNU Make, 3rd Edition [Book]* Chapter 9. Java. Many Java developers like Integrated Development Environments (IDEs) such as Eclipse. Given such well-known alternatives as Java IDEs and Ant, readers could well ask why they should even think of using *make* on Java projects. This chapter explores the value of *make* in these situations; in particular, it presents a generalized makefile that can be dropped into just about any Java project with minimal modification ...

Appendix A, provides a reference guide to GNU make's command-line options. Appendix B, explores the limits of GNU make with two unlikely capabilities: managing data structures and performing arithmetic. Appendix C, contains the GNU Free Documentation License, under which the text of the book is distributed.

*Managing projects with GNU make | Mecklenburg Robert ...*

Well, you can. GNU make has a couple dozen built-in functions for working with variables and their contents. The functions fall into several broad categories: string manipulation, filename manipulation, flow control, user-defined functions, and some (important) miscellaneous functions.

*4. Functions - Managing Projects with GNU Make, 3rd ...*

*Managing Projects with GNU make, 3rd Edition* provides guidelines on meeting the needs of large, modern projects. Also added are a number of interesting advanced topics such as portability, parallelism, and use with Java. Robert Mecklenburg, author of the third edition, has used *make* for decades with a variety of platforms and languages.

*Managing Projects with GNU Make on Apple Books*

*Make* is a strange, very powerful non-procedural language for projects managing, and this book tries to explain its obscure characteristics. If you plan to use the examples as a base for your own makefiles, take a look at the erratas on the O'Reilly website (there are some typos in the less common used procedures, personally I've found a lot in the *make*-depend parts).
