A spacecraft is a vehicle or machine designed to fly in outer space. A type of artificial satellite, spacecraft are used for a variety of purposes, including communications, Earth observation, meteorology, navigation, space colonization, planetary exploration, and transportation of humans and cargo. All spacecraft except single-stage-to-orbit vehicles cannot get into space on their own, and ...

Spacecraft - Wikipedia

Spacecraft require an onboard source of electrical power to operate the equipment that they carry. Those designed to remain in Earth orbit for extended periods generally use panels of solar cells, often in conjunction with storage batteries. The shuttle orbiter, designed for stays in space of one to two weeks, uses hydrogen-oxygen fuel cells.

spacecraft | Definition, Types, & Facts | Britannica

Starship Service to Earth orbit, Moon, Mars and beyond
